WO 01/12658 A3

(54) Title: HUMAN ICOS LIGAND AND APPLICATION THEREOF

(57) Abstract: Human protein termed herein B7-3 encoded by the *B7-3* gene has been cloned and characterised and can be made recombinantly and used. B7-3 protein is a ligand for inducible co-stimulator protein (ICOS). A soluble form of B7-3, for example comprising the extracellular domain shown to bind ICOS, is further provided, as are assay methods for obtaining agents for modulation of the interaction between B7-3 and ICOS.

° Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.1

Although claims 22, 24-28 and 30-33 (as far as in vivo methods of treatment of the human/animal body by therapy are concerned, see pages 39-40, 44-51) are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.

Continuation of Box I.2

Claims Nos.: 17 and 22-33 all in part

Present claim 17 relates to an agent defined by reference to the following desirable characteristics or properties: (1) the ability to interact with the polypeptide disclosed in present application, whose amino acid sequence is shown in SEQ ID NO:2, or with fragments thereof; (2) the ability to modulate the interaction between the polypeptide disclosed in present application (indicated as B7-3, whose amino acid sequence is shown in SEQ ID NO:2) and the polypeptide named ICOS (whose amino acid sequence is described in " Nature 1999; 397:263-266 by Hutloff et al.", cited in present application); (3) the ability to affect B7-3- or ICOS-mediated activity.
Present claims 22-33 relate in part to different uses of said agent and to methods involving said agent.

Claim 17 covers all the agents having these characteristics or properties, whereas the application provides support within the meaning of Article 6 PCT and disclosure within the meaning of Article 5 PCT for only a very limited number of such agents.

In fact, present application refers in a speculative manner to proteins identified by scanning computer sequence databases (page 6), to non-peptidyl agents (page 7), to antisense molecules (pages 8-9), to ribozymes (page 9), to fragments of the B7-3 polypeptide (pages 14-15), to fragments of ICOS (page 15), to synthetic or chemical compounds (page 34), to anti-B7-3 or anti-ICOS antibodies (page 35), to mimetic compounds (pages 40-43).
However no proteins identified by scanning computer sequence databases, non-peptidyl agents, ribozymes, synthetic or chemical compounds, or mimetic compounds are disclosed in present application.

In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible.

Independent of the above reasoning, the claims also lack clarity (Article 6 PCT). An attempt is made to define the agent by reference to a result to be achieved. Again, this lack of clarity in the present case is such as to render a meaningful search over the whole of the claimed scope impossible.

Consequently, the search has been carried out for those parts of the claims which appear to be clear, supported and disclosed, namely those parts relating to peptide fragments of B7-3 or ICOS, to antisense

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

molecules specific for the gene encoding B7-3 and to binding members comprising an antigen-binding domain of an antibody specific for the polypeptide of present application or specific for ICOS.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
